Tree ID	Species	Comment	Age	Height (m)	ULE	DBH (cm)	Health	Structure	Suitable to retain	TPZ footway (m)	TPZ roadside (m)	Tree compromised by works
---------	---------	---------	-----	------------	-----	----------	--------	-----------	--------------------	-----------------	------------------	---------------------------

Explanation of column headings

TPZ measured from centre of tree and is tree protection zone for tree health and stability.

DBH is diameter measured at 1.4m above ground level

ULE is anticipated Useful life in the current circumstances.

Suitability to retain = is the tree worth keeping/designing around.

TPZ footway = footway area including under kerb and gutter where most roots proliferate required to retain healthy /stable tree. TPZ is generally modified from 12 x dbh

TPZ roadside = distance from centre of tree into the road that is required for tree health and stability. TPZ is generally modified from 12 x dbh

Tree compromised by works: Y = Tree would need to be removed if works as described are implemented. N = Tree not affected. Unknown = Insufficient information to determine

Comments are the Arborist inspection comments from Council tree system
